

# Integrated Cloud Email Security

Modern cloud email security stops the sophisticated email attacks like BEC, credential stealing, ransomware, and malware threats to reduce the risk of a data breach in Microsoft 365.

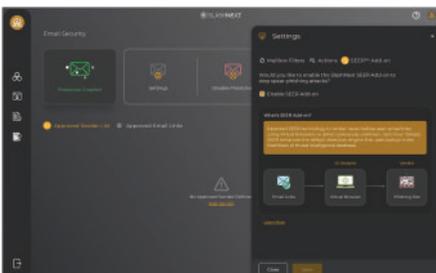

## Powerful, Simple, Secure, Fast ROI

Now organizations can leverage SlashNext's award-winning AI threat detection to securely detect and remove targeted spear-phishing and other human threats that easily evade email security defenses.

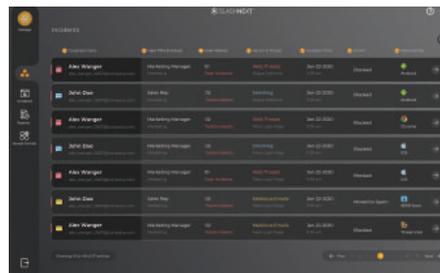

Current email defenses, including Microsoft 365 built-in security, miss up to 65% of targeted spear phishing, social engineering, business email compromise (BEC), and other malicious digital user attacks launched from legitimate, trusted sites. Targeted, well-crafted spear-phishing continues to rise dramatically in an environment where cybercriminals use automation and AI to increase the likelihood of compromising a target. The once-reliable security strategies of Secure Email Gateways (SEGs), proxy/SASE, and endpoint protections cannot safeguard against rapidly evolving phishing tactics. Spear-phishing delivered through legitimate cloud services can bypass traditional cybersecurity solutions. Since these attacks focus on a person, not the technology, success rates are higher, providing the attacker a lower-cost entry point into an organization.

With SlashNext's AI-based email protection continuously detects and remediate spear phishing threats missed by Microsoft Defender, ATPs and relationship graph technologies with 99.9% detection rate and 1 in 1M FPs. Organizations can detect these targeted attacks with pinpoint accuracy and remove them from individual infected user inboxes with one click. Leverage SlashNext's patented HumanAI to detect and remove attacks that easily evade relationship graphs, URL rewriting, and sandbox email security technologies.

## THE SLASHNEXT ADVANTAGE

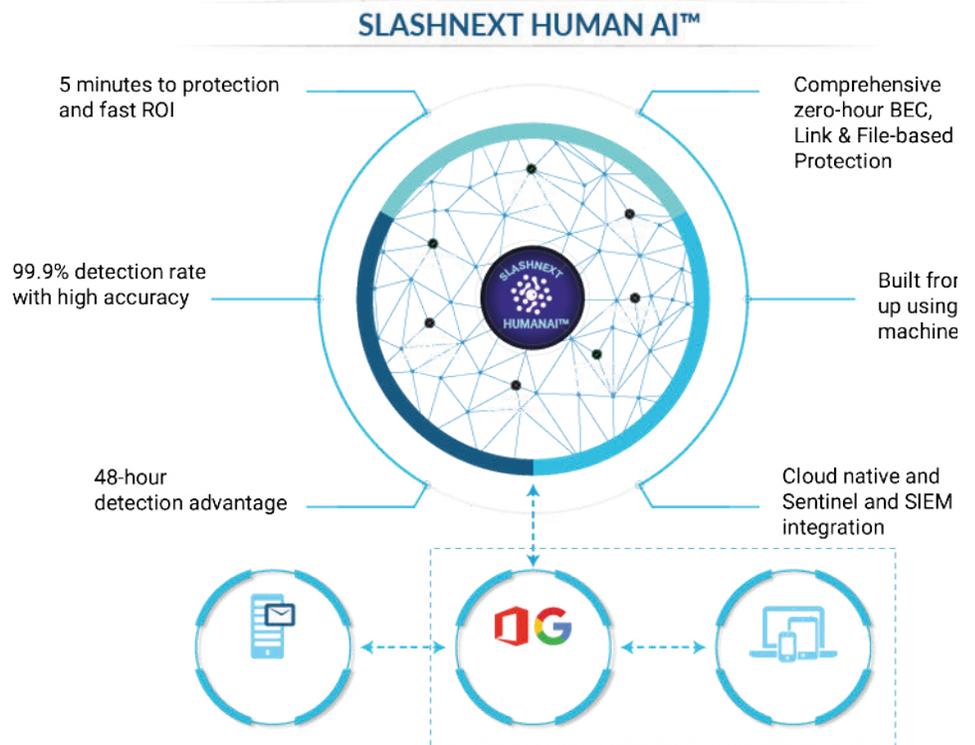

- Powerful**  
 Unparalleled, 99.99% zero-hour detection and one in 1 million false positive rate provides confidence in remediation.
- Simple**  
 Instant detection of spear phishing and other threats. Respond immediately by user, group or company-wide to any threat identified.
- Secure**  
 As a SaaS-based trusted and verified partner of Microsoft it takes five minutes to instant detection by securely authenticating to the Microsoft Graph API using OAuth.
- Fast ROI**  
 Dramatically reduce the time it takes to remove the threats missed by a Microsoft 365. Security teams, on average spend three to five minutes per incident, so payback period is in weeks.
- Full Visibility**  
 Elegant cloud management console enables simple deployment, management, and advanced reporting across threats, users, and devices.

## Harness the Power of Real-Time with HumanAI™

SlashNext's patented behavioral phishing detection technology uses millions of virtual browsers to detect unknown threats with unmatched accuracy. SlashNext HumanAI technology is specifically trained to stop zero-hour BEC, account takeover, credential theft attacks using generative AI, relationship graph, contextual analysis, natural language processing, and computer vision.

These are the key ingredients needed to proactively stop zero-hour attacks. Sophisticated machine learning algorithms and virtual browsers perform rich analysis to accurately detect zero-hour phishing threats and numerous enrichment artifacts.

This unique combination of techniques sees through evasion tactics and accurately detects phishing pages, even those hosted on compromised websites and legitimate infrastructure. It also follows through on all URL re-directs and performs run-time analysis on the final page of multi-stage threats.

### About SlashNext

SlashNext protects the modern workforce from malicious messages across all digital channels. SlashNext Complete™ integrated cloud messaging security platform utilizes patented AI technology with 99.9% accuracy to detect threats in real-time to stop zero-hour threats in email, mobile, and web Messaging Apps across M365, Gmail, LinkedIn, WhatsApp, Telegram, Slack, Teams, and others messaging channels. Take advantage of SlashNext's Integrated Cloud Messaging Security for email, browser
